OUR PROGRAM
Pediatric cancers are different from adult cancers, primarily because childhood cancers are extremely rare and complex. A specialized team of health care professionals is required to care for a child with cancer. The University of Michigan C.S. Mott Children’s Hospital Solid Tumor Oncology Program is one of the largest pediatric oncology multidisciplinary teams in the United States, providing comprehensive care for all children with solid tumors including neuroblastoma, Wilm’s tumor, liver tumors, and sarcomas.

OUR TEAM
Our pediatric oncologists and surgeons will make every effort to see patients within a week of referral and will accommodate urgent appointments when needed. Our specialists attend a weekly meeting to discuss the options, risks and benefits to design the most effective treatment plan for each child. Our experts include:

- Pediatric Oncologists
- Pediatric Surgeons
- Nurse Practitioners and Nurses
- Pathologists
- Diagnostic and Interventional Radiologists
- Licensed Clinical Social Workers
- Radiation Oncologists
- Child Life Specialists
- Dieticians and other Specialists as needed

We also provide a program coordinator to help families and referring physicians through every step of the process. We offer assistance for patients traveling long distances, or that may require additional family services and support.

WHEN TO CALL
- If you identify any new lumps/bumps, or enlarging masses
- If you have questions about treatment options for your patient
- For specialized surgical treatment options
- For innovative cancer treatments and research trials
- If your patient requires multidisciplinary care including complex social support

FOR MORE INFORMATION
We welcome all inquiries about our services and are happy to provide family consultations, group presentations, or private presentations to discuss our wide range of pediatric specialities.
